

A Safer Playing Environment

All parents hope their children have a first class sporting and soccer experience. During a game or practice, should something happen to their child...an injury, allergic reaction, or sudden illness...it is essential for coaches and medical personnel to have an accurate and up to date medical history of the player in order to ensure they are protected and treated in the best way possible..

e-PPE stands for *electronic Pre-Participation Evaluation*. Owned by PrivIT Healthcare Inc., it is a specialized, privacy compliant Internet based application that aids soccer clubs in collecting and managing the key medical and contact information of every player in its organization. This data is then summarized on an Emergency Information form that can be given to each player's coach. In case of a medical emergency, both on and off the field, the coach will then have the necessary information to act quickly and with confidence to ensure each athlete gets the correct medical care.

A Safer Way to Play

How Does It Work?

Every player in the Club will be granted secure, private and convenient access to the e-PPE Youth application via the Internet. The authentication process consists of a login name (e-mail address), password (user generated) and access key. Once the player, or parent in the case of a minor, completes the e-PPE form, the Club will then have the key medical information such as allergies, medications, immunizations and any other special consideration. You can update this medical record at any time; anywhere there is Internet access. The player or parent can then print off the Emergency Information form and give it to their coach so that, in the event of an emergency, their coach will have all the necessary medical and contact information at his/her fingertips.

Privacy Is Important

Who Else Is Using e-PPE?

e-PPE is a family of products useable by athletes from elementary school to the elite and Professional level. Current users include

- Canadian and US Universities, Colleges
- Canadian Athlete Monitoring Program - CAMP
- UK Rugby

Privacy and Security are closely entwined. While Security is about protecting data from the outside threats of theft or interception of data, Privacy is about the owner of the data granting permission to someone else to access the data. e-PPE Youth complies with the regulations and guidelines governing privacy of personal medical information. No one can access your or your child's, medical information without your approval. Club coaches can be given the Emergency Information forms of each player on his/her team, so that in the event of an emergency, the coach has all the necessary medical and contact information needed to act swiftly with confidence.
